

LITHOS Talk can be used in several kind of application in agriculture and food industry.

Through its smooth flat lamellae structure, talc can be used in perfect way as feed additive. It is used as **anti-caking agent** and **flow regulating agent** and can influence the **feed** in a positive way. Further Talc has water-repellent characteristics, which improves the throughput and mix homogeneity of the feed and reduces the moisture in it.

Next to feed applications, talc can be used in food industry as **release agent** and **carrier substance** for colours and nutrients.

Talc is especially used in oil production and acts as a processing aid to increase yield and improve the clarity of the oil.

Hint:

Our Team will advise you the best suited product according to your needs.

Packaging:

- ✓ 25 kg bags
- ✓ 1000 kg BigBag

Recommendation of Use:

- ✓ Anti-caking agent in animal feed
- ✓ Processing aid and carrier substance in food industry

Talc

Functional additive for applications in animal feed and food industry

Benefits and effects:

- ✓ Increasing of the flow characteristics
- ✓ Avoids sticking of the feed
- ✓ Water-repellent effect
- ✓ Processing aid
- ✓ Machines are treated with care
- ✓ Increase of productivity
- ✓ Purely natural product
