

## Talc in cosmetic and pharma industry

As talc is the softest mineral it is very often also found in the cosmetics and pharmaceutical sector. Since a long time ago the high lamellar and platy material is used for care products.

Talc is primarily used as a basis for powders but as well for rouges, eye shadow and shimmer for powders. Further it is used as lubricant and thinning agent for pills.

Through the characteristics of talc it is possible to save costs and guaranty high quality of the end product.
